- Bootstrap
- Python

SAMIR NASSIRI

Specialized IT Development Technician

Professional Profile

IT Development Technician with hands-on experience in designing and developing web and desktop applications. Skilled in JavaScript, React, Python, PyQt5, HTML, CSS, Tailwind CSS, SQL, MySQL, and SQLite, with practical experience in database design, REST API development, and application deployment. Experienced in developing business-oriented software solutions, including an ERP system for cold-storage management with customer management, contracts, inventory and crate tracking, user roles, reporting, document generation, and data management. Also experienced in developing multilingual and responsive web applications, with a strong focus on clean UI/UX, usability, performance, and maintainable code. Strong problem-solving skills and a practical approach to transforming business requirements into functional software solutions.

Professional experience

Municipality Ksar Toulal Website — Internship

May 2025 - Jun 2025

Contributed to the design and development of the first official website for the Municipality of Ksar Toulal. Developed a responsive and multilingual platform using HTML, CSS, JavaScript, and JSON, without relying on external frameworks. Worked on structuring and presenting municipal information in a clear and accessible way, while gaining practical experience in web development and public-sector digital transformation. Continued contributing to the project beyond the internship, further strengthening my technical and problem-solving skills.

Frigo Slimani — Internship

Jan 2020- Jun 2022

Design and development of a professional desktop application for managing a cold storage business, implemented using Python and PyQt5. Implementation of a secure SQLite database, an operations and inventory management system, and a user and permissions management system. Development of features for generating PDF documents and reports, with particular attention paid to data reliability, usability, and application security. The application is packaged as a standalone executable file (`.exe`) that can be deployed on user workstations.

Projects

Atlas Fruits Cooperative Meknes — Freelance

Design and development of a desktop management application for a cold storage business. The solution was developed using Python, PyQt5, and SQLite, integrating comprehensive management of clients, contracts, products, cold storage rooms, and cash registers. Implementation of a system for tracking incoming and outgoing stock, inventory management, cash register status monitoring, user and permission management, as well as document and report generation. The application was designed around the client's business needs, with a particular focus on usability, data reliability, and ease of use. The application is distributed as a standalone Windows executable.
